

Manufacturing Capabilities: Custom Millwork and Components

Within the Pineville warehouse, The Building Center operates an extensive millwork manufacturing operation. The craftsmen there work with customers to develop custom trim profiles, or create custom components.

Some of the components that can be job-site delivered, ready to install, include: stairs, mantels, closet systems, shelving, and built-in cabinetry.

Door Shops in Pineville and Greensboro

TBC also operates two door shops; one in Greensboro and one in Pineville.

From these locations, The Building Center provides customers throughout the two-state region with framed entry door systems from a variety of suppliers – choose steel, fiberglass, or beautiful natural wood.

The TBC/supplier relationship facilitates the ability to customize panel/sidelite/transom widths and heights, and of course the frames will be configured accordingly.

Interior doors are a big part of this business as well, and again The Building Center has ample stock including solid and hollow-core doors, louvered doors, and wood doors.

Our mission is to be your most valued building partner, building the homes we live in today.
